AI702 Lab 0 Post-lab

Computing environment, arrays and experimental evidence

Answer the questions below using your experiment results. Include the run ID, relevant filenames and numerical values. Give the sample ID when discussing a particular prediction. **Write your answers in your own words and submit them in the LMS. Follow the course AI-use policy. Do not change the results files.**

Problem 1 Matching predictions and checking units

For targets of shape (n,1) and predictions of shape (n,), explain why a direct equality comparison can give a plausible but incorrect accuracy.

Submission Instructions

On Moodle LMS submit a single ZIP file containing:

1. A single PDF file named prelab.pdf containing answers to the pre-lab questions
2. The zip file created by running *uv run --locked python lab.py package 0 --run-id RUN_ID*
3. The zip file created by running *uv run --locked python lab.py package 0 --stage transfer --run-id RUN_ID*
4. A single PDF file named postlab.pdf containing answers to the post-lab questions
